Trayer

Trayer: The Right Load Protection, Right When You Need It!

Whether it's single- or three-phase, DSG has the right fault interrupters to make your job easier, quicker and safer!

- **Two Trip Indicators Eliminate Confusion!**

When tripped, a bright yellow rod is visible inside the clear sight glass. For secondary trip indication, an external power supply is hooked up to the relay, indicating the faulted phase with a bright, blinking LED light.

- **Flexible Enough For Any Job!**

Each of the Trayer 4000 Series' VFI mechanisms are independent, but can be set through the relay to trip all three phases – good news for customers with both single-phase and three-phase loads throughout their system.

- **Built To Last!**

These VFIs are stainless steel and watertight, for zero-maintenance use in the harshest environments.

**It's time to put the power of DSG
and Trayer to work for you!**

Go online to

**www.dakotasupplygroup.com/contest
and enter the code on the front of this postcard to
register for your chance to win a prize from DSG!**

No purchase necessary. See web site for details.
